0000
           40
0000
           41
                          This module defines the data structures required for a piece
                          of loadable code. This includes the pool header and the code needed to hook into the rest of the system. For the instruction
           42
0000
0000
0000
           44
                          emulation code, the hooks are vectors in the SCB.

VAX-11 Macro Run Statistics 5-SEP-1984 00:44:19 [EMULAT.SRC]LOADHDR.MAR;1 (2)

16957 bytes (34 pages) of virtual memory were used to buffer the intermediate code. There were 20 pages of symbol table space allocated to hold 250 non-local and 5 local symbols. 261 source lines were read in Pass 1, producing 17 object records in Pass 2. 12 pages of virtual memory were used to define 11 macros.
